

JOURNAL OF MATHEMATICAL ANALYSIS AND APPLICATIONS **49**, 527 (1975)

Erratum

Volume 42, No. 2 (1973, in the article "Zeroes of the Successive Derivatives of Entire Functions" by R. P. Boas, Jr. and A. R. Reddy, pp. 466–475: Jurgen and Korner have pointed out to the authors that the construction of Theorem 2 is incorrect.

Consequently, whether or not an entire function of order greater than 2 must have arbitrarily large disks in which $f^{(k)}(z)$ is zero-free for infinitely many values of k is an open question.
